DETAILED ACTION

In response to Amendment After Final filed August 9, 2005

Reasons for Allowance

- 1. The following is an examiner's statement of reasons for allowance:
 - a. Claims 9, 30, and 36 39 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of evaluating the clearance by attempting to collapse the impression foam to a greater extent than the impression foam was collapsed by sitting the person on the cushion with the anatomical portion adjacent to the support contour in combination with the remaining limitations of the claims.
 - b. Claims 10, 31, and 40 43 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of evaluating the clearance by forming a hole through the impression foam at a location where the impression foam was collapsed by

sitting the person on the cushion with the anatomical portion adjacent to the support contour in combination with the remaining limitations of the claims.

- c. Claims 4 8, 11, and 32 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of enclosing the niece of impression foam within a flexible plastic envelope prior to locating the clearance measurement device on the support contour at the predetermined location where the clearance is to be evaluated in combination with the remaining limitations of the claims.
- d. Claims 14 18 and 33 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of measuring an initial thickness of the putty-like substance prior to locating the putty-like substance on the support contour at the predetermined location where the clearance is to be evaluated and prior to sitting the person on the cushion with the anatomical portion adjacent to the support contour, forming a hole through the putty-like substance at a location corresponding to the predetermined location where the clearance is to be evaluated after the person sat on the cushion with the anatomical portion adjacent to the support contour, measuring the thickness of the putty-like substance at the hole; and evaluating the clearance by

comparing the measured thickness with the initial thickness in combination with the remaining limitations of the claims.

- e. Claims 19, 34 and 44 47 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of enclosing the putty-like substance within a flexible plastic envelope prior to locating the clearance measurement device on the support contour at a predetermined location where the clearance is to be evaluated in combination with the remaining limitations of the claims.
- f. Claims 20, 22 24 and 35 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of selecting the clearance measurement device to include a flexible envelope containing fluid, applying pressure to conduct the fluid from the envelope by sitting the person on the cushion with the envelope between the anatomical portion and the support contour', and evaluating the clearance at the predetermined location by determining amount of fluid remaining in the envelope after the person has been sitting on the cushion with the anatomical portion adjacent the support contour while the clearance measurement device was located at the predetermined location in combination with the remaining limitations of the claims.

g. Claims 2, 12, 21 and 25 - 29 are allowable over the Prior Art of Record because it fails to teach or suggest a method of evaluating clearance between a support contour of a seat cushion and an adjacent pelvic and proximal thigh anatomical portion of a person sitting on the cushion, comprising the step of performing the aforesaid locating, sitting and evaluating steps with a cushion having a second support contour to obtain a second clearance from the second support contour at substantially the same predetermined location that the first clearance was obtained from the first support contour, and selecting one of the first or second support contours by evaluating the first and second clearances relative to one another in combination with the remaining limitations of the claims.
